Also, I found out that the Power Steering/ Hydraulic Fluid (Pentosin Fluid CHF11S) is a really thin fluid compound that will find any possible way to escape out of its closed system and this really explains why most of the hydraulic system fails due to fluid leak. To cut the long story short this is what I did;

7. Check cooling system for leaks. 8. If venting has to be carried out again (e.g. if cooling system is leaking), allow DME to fall completely (leave ignition key removed for approx. 3 minutes), then repeat from Point 3.

Just wanted to say the valve seal replacement job on the bmw n62 engine does not have to cost thousands. we rent out the all german auto bmw n62 valve seal kit that allows the car owner to replace the valve stem seals without removing the heads, cams or having to change the timing on the car, so for \$220 you can get this major problem fixed at a fraction of the cost.

BMW X5 (G05) 2019-2024 Service ... Fill and bleed hydraulic system. Check pipe connections for leaks. Mount securing fixture for vehicle on lifting platform to prevent the vehicle from slipping off or tilting ...

Hi guys, how do I bleed the air from cooling system properly, after flushing the coolant? I've searched on the internet; some say there is a valve, some say one has to connect battery charger, put heater temp on max and fan on the lowest settings and press down the gas pedal for 10 seconds with the ignition on.
