The higher the AH, the longer a battery will provide power before it runs out of charge. For example, let's say you have two 12V batteries: Battery A has a 100 AH rating; Battery B has a 50 AH rating; Battery A can deliver 5 amps for 20 hours before the charge is depleted (5 amps x 20 hours = 100 AH).

C-rate of the battery. C-rate is used to describe how fast a battery charges and discharges. For example, a 1C battery needs one hour at 100 A to load 100 Ah. A 2C battery would need just half an hour to load 100 Ah, while a 0.5C battery requires two hours. Discharge current. This is the current I used for either charging or discharging your ...
