How many panels can a 600V inverter have?

$600V \div 44.737V = 13.41$ panels So this means if you connected 13.41 panels to your inverter you would be right at the inverter's voltage limit. Now obviously you can't have 0.41 of a panel, so you always round down to the nearest whole number. In this case, 13 panels per string is the maximum.
