The li-ion cells from the laptop are VERY sensitive to overcharge, over-discharge, over heating, and physical damage. As a result you must built or incorporate a battery management system into your charger that will deal with these issues. To get you started: Li-ion cells are charged via a constant current/constant voltage system.

Image 1: A Lithium-ion battery showing Watt-hour (Wh) rating on the case. This is usually stated on the battery itself (see Image 1). If not, you can calculate it as Volts x amp hours (Ah). example 1: an 11.1 volt 4,400 mAh battery - first divide the mAh rating by 1,000 to get the Ah rating - 4,400/1,000 - 4.4ah.
