

All the solar systems and every object they contain answers

A galaxy is a huge collection of gas, dust, and billions of stars and their solar systems, all held together by gravity. We live on a planet called Earth that is part of our solar ...

In July of 2015, a spacecraft named New Horizons arrived at Pluto after a long journey. It took amazing pictures of this dwarf planet and will continue to study other objects in the Kuiper Belt ...

Each part follows its own path, but all stay connected by the Sun's gravity. Main Components of the Solar System The solar system has many interesting parts. You can learn about each one ...

Milky Way Galaxy (sometimes simply called the Galaxy), large spiral system of about several hundred billion stars, one of which is the Sun. It takes its name from the Milky Way, the irregular luminous band of stars and ...

The answer is gravity: an invisible force that pulls objects toward each other. Earth's gravity is what keeps you on the ground and what makes things fall. An animation of gravity at ...

Since asteroids formed at the same time as other objects in our solar system, these space rocks can give scientists lots of information about the history of planets and the sun. ...

In our Solar System, Saturn is the second-largest planet and is famous for its spectacular ring system, made of ice, rock, and dust. It is a gas giant just like Jupiter, meaning that Saturn is made up mostly of hydrogen and ...
