

Anti theft system the system has lost power

How does an anti theft system work?

This anti-theft system replaces a part of the fuel line, and you control it by turning a knob. Fuel will flow to the engine in the open position but will not flow through in the closed position. This device cuts power to the fuse box using a switch. You can run wires to it, which enables you to hide the switching mechanism inside the cabin.

How to deactivate the anti-theft system?

To deactivate the anti-theft system, car owners must first use the key to unlock the door. Then, change the switch of the ignition to the "on" position.

What happens if the anti theft system fails?

Typically the anti theft system must be repaired before the vehicle can operate at all. There are some failures that will allow the vehicle to operate, but any issue with the anti theft system leaves the driver and passengers at a risk for being stranded or locked out.

Why is my anti theft system not working?

There are also other issues to take note of that lead to problems with your anti theft system such as ECU issues, overly responsive sensors, and a faulty hood latch. If you are still unsure what is causing the problem, you will have to take your vehicle to the dealership and get it checked by a professional.

How do I Reset my anti theft system?

While it may not be straightforward to do, there are some steps you can take to go about it. In a nutshell, doing a reset of your anti theft system means turning your car on but without starting the engine. You need to press and hold a button found on the infotainment display. By pressing and holding it for about three seconds, the reset is done.

I had the "Anti Theft System" "The Navigation system has lost power. Push and hold the power button for more than two seconds to enable the system." Message come up today. I was powering the car on and off with the Start button. Finally the girlfriend says try the radio power button. That worked.
