What is an APS power supply?

An Advanced Power Supply (APS) power supply is a type of power supply that comes with built-in programmable output resistance capability. This feature allows the APS to simulate the internal resistance of a battery. The APS's smart triggering system provides unique trigger capabilities never before seen in a power supply.

What is APS ground-level power supply?

Alstom's APS ground-level power supply system is a proven alternative with equivalent performance which is currently operating in seven cities on three continents and offers safe, reliable power to trams whether in short catenary-free sections or along the entire line.

Are adaptive power systems programmable DC power supplies a good choice?

Look no further for powerful yet cost effective DC power test solutions than the compact DCS Series programmable DC power supplies from Adaptive Power Systems. Designed using state-of-the-art Digital Signal Processing, these power supplies support a wide range DC tests with excellent performance and reliability.

Security Systems & Cameras. Home security systems; Outdoor security cameras; ... An uninterruptible power supply, or UPS, is basically a surge protector, battery, and power inverter--which turns ...

The uninterruptible power supply system, hereafter referred to as the UPS, shall provide high-quality AC power. 1.2 Standards ... The Vertiv(TM) Liebert® APS UPS system shall consist of the appropriate number of modules for capacity and/or redundancy. All modules shall operate simultaneously and share the load.

A number of ground-level power supply systems were developed from the 1970s through the 1990s, [8] but were not reliable or safe enough for commercial use. [9]The first ground-level power supply system developed to modern safety standards was the Ansaldo Stream, [7] although a competing system, Alstom APS, was the first to be commercially implemented in 2003.

Adaptive Power Systems (APS) was founded in 2003 to manufacture and distribute a complete and extensive line of AC and DC power equipment to meet world-wide applications. The equipment is sold by independent sales representatives and distributors throughout the world.

The Auxiliary Power Supply (APS) is a UL 864, 9th Edition listed power supply. It is a 24 Vdc filtered-regulated, and supervised unit that can easily be configured to provide additional notification appliance circuits (NACs) or auxiliary power for Mass Notification / Emergency Communication (MNEC), as well as life safety, security, and access control applications.

The Vertiv Liebert APS is a modular online double conversion UPS, offering the highest level of power conditioning and power protection for critical IT systems. Continuous power conditioning, zero transfer time, pure sinewave output and scalable runtime make it ideally suited to protect critical infrastructure in both centralised and edge network applications.

With the Keysight Technologies, Advanced Power System (APS) 1 kW and 2 kW system power supplies, you get a new level of power supply performance. The Advanced Power System (APS) family was designed with VersaPower architecture to help you overcome your toughest power test challenges by delivering industry-leading specifications and innovative ...

The first ground-level power supply system developed to modern safety standards was the Ansaldo Stream, although Alstom APS was the first to be commercially implemented in 2003. [12] This success led to a proliferation of commercial implementations of ...

New tramway technologies such as "ground-level power supply systems" fit with the purpose of preserving historical heritage and urban environments of city centers. Such public transportation systems do not require a traditional air supply system (+ 750 V) and are therefore referred to as "catenary-free systems" (i.e., APS system, tramwave system, Primove system). ...

The DCB Series combines a DC supply with a DC load using regenerative mode to return energy back to the grid in sink mode. ... Add Power, Flexibility, and Speed to Your Test System. The Advanced Power System (APS) N6900 Series power supply is ideal for automated test equipment (ATE) applications where high performance is critical. Adding any combination of the four performance options will increase performance where you want it most. Versatility has never been faster.

Add full, 2-quadrant operation to any APS power supply with the N7909A APS power dissipater unit. If you have ATE applications where a full-featured, high-speed dynamic sourcing and measurement is needed, consider the APS N7900 Series power supplies. BenchVue software enabled: Do more with your PC and instrument together, no programming required.
