Start your journey towards a sustainable future by exploring the possibilities of fitting solar panels to your tiled roof today.

How long do solar panels last on a flat roof?

Most UK roofs are strong enough to hold solar panels for their entire lifespan - which can last 40 years or more. This is because a solar panel system usually weighs about 20kg per square metre, which the great majority of roofs can hold. However, flat roofs may not always be strong enough for solar panels.

Are solar panels suitable for flat roofs?

This is because solar panels are suitable for most types of roofs, including flat roofs. Although these systems are more commonly found on the roofs of commercial businesses, they're also suitable for flat-roofed residential properties.

Do you need an electrician to install solar panels on a roof?

Proper electrical connections are vital for efficient solar panel operation on a roof system. Engage a qualified electrician who specialises in solar installations to ensure compliance with electrical codes and safety standards. This is especially important for the weatherproof roof covering, such as a slate roof.

Can a UK roof support solar panels?

As long as your roof is pitched, has enough unshaded space, and doesn't contain spray foam insulation underneath, it should be suitable for solar panels. The large majority of UK roofs are more than capable of supporting solar panels for as long as you need them to.

Can a solar system be installed on a roof?

It isn't a particularly disruptive process, taking place almost entirely on your roof rather than inside your home. The only internal piece of most solar PV (photovoltaic) systems is the inverter, which will usually sit in your loft. Compared with having windows or a kitchen fitted, a solar installation is pretty low hassle.
