

Are solar panels worth it in texas reddit

Are solar panels worth it?

Solar panels are worth their weight in gold, according to Cesar in Pflugerville, Texas. His electric bill went down by \$60 or \$70 each month. Becca in Fort Worth, Texas, said she's saved "over \$7,000" since going solar. Over 25 years, homeowners with solar panels avoid \$61,774 in utility costs on average.

Are solar panels a good option for Texas homeowners?

By disconnecting from traditional electricity, you can avoid the frustrations of power outages and enjoy the uninterrupted reliability of a solar battery-powered energy system. Solar panels have minimal maintenance requirements, making them a cost-effective energy solution for Texas homeowners.

Do solar panels save money in Texas?

Texas homeowners with solar panels can typically save more than that in total avoided energy costs over the lifetime of a system. The Consumer Affairs Research Team has conducted extensive research to compare the costs of going solar in Texas and other states.

Do solar panels save money?

Becca in Fort Worth, Texas, said she's saved "over \$7,000" since going solar. Over 25 years, homeowners with solar panels avoid \$61,774 in utility costs on average. "In Texas, we get plenty of sun, so there's no reason not to take advantage of it," Anthony in Center, Texas, told us.

Are solar panels a good investment?

While initial installation requires a significant monetary commitment, eventual savings on energy bills, financial incentives, and tax breaks offset the cost of solar energy. Solar panels can also substantially increase the value of your home, so an investment in solar energy can lay the foundation for a lucrative future.

Why should you invest in solar power in Texas?

In addition to bolstering your finances, solar power can also grant you independence from the electrical grid, sparing you the stress and inconvenience of widespread power outages. As a dynamic industry, constant improvements in solar technology offer unmatched efficiency and invaluable peace of mind for Texas property owners.

In this comprehensive guide, we'll weigh the pros and cons of solar panels in Texas, carefully evaluating the advantages and disadvantages of solar energy so you can make the most informed decision for your home.

Are solar panels worth it in texas reddit

So far, Tesla is \$20,000 - \$30,000 less expensive than similar system quotes I've received in Minnesota. But the stories I'm reading on Reddit have me wondering if all the savings is worth the potential frustration and issues that seem to be plaguing those who have recently installed Tesla solar panels. Has anyone had a positive experience?

You are not going to save any money going with solar in the short term. Until you own the system outright you will pay more for your solar system than you save in electricity. However, not by a lot. If I make only minimum payments on my system only by a few hundred dollars a year. That being said, as energy prices rise my solar costs stay the same.

Ever since Tesla started to require a Powerwall with their solar panels I've been hesitant to add Tesla solar to my home. I've been trying to find all the benefits that would make an extra 10.5k (Before incentives) worth it. The only benefit I can see is that I can have power during a power outage but power outages are infrequent in my area.

If you plan on (or even think you might) live in your home for the payback period (7-10 years) they are worth it. At the end of the payback period, every kWh they produce is bonus. I always think ...

Federal and state incentives helped facilitate significant growth in utility scale-solar power in Texas, helping to spur investment in renewable energy. Federal incentives such as the Investment Tax Credit provide a direct credit that covers a portion of investment costs for a solar project that has helped advance the energy source.

A place to discuss Tesla Solar Panels, Solar Roof, Power Wall, and related gear. ... they save me between \$1 and \$3 a day running off batteries during peak hours. Maybe with NEM 3, but really don't think solar is worth the cost at all with NEM 3. ... I contact all regulatory and government agencies in Texas and the only reply was, "That NEM ...

Hi, I am trying to switch to this plan too.. I have small Solar system by Tesla for 1 y now : 7.2, No battery. I am in Allen, Tx with Oncor, and Energy Texas- Provider. Here is my August Bill 2023: Previous Meter Read 8/4/2023 1,995 Current Meter Read 9/5/2023 2,938 Days in Cycle 32 Electricity Plan: Come & Take It 12 @ 7.8947 ¢/kWh

This blatant disregard for customer concerns and the apparent lack of effort to resolve the issue is unacceptable. It seems like they are knowingly charging us for non-producing solar panels, which they have acknowledged. Our solar panels have not been producing since April 2022, 0 killawatts from then to now.

Solar can definitely be worth it but the best way to gain from it is to consider a home loan to pay for them as they are capital expenditure. Just remember that Texas allows EPE to charge \$30/month for the convenience of having solar panels on your house, and EPE will only give you a super reduced flat rate for the power you sell back to them.

Are solar panels worth it in texas reddit

Fyi, the Texas power grid is a bit different than most others. Texas has an abundant supply of wind turbines. And, the wind blows significantly at night. Therefore, unlike solar, Texas has a large renewable amount of electricity available during the overnight hours which is why sometimes the price of electricity turns negative during the overnight.

Are the solar panels a good alternative, considering the way energy prices could go. Can't decide what to do. Any advice? Just a update. I'll thank you all for your advice it has helped me a lot I've spent most of my day reading up, doing independent calculators and realised with my current set up the Solar just isn't worth it.

Some roofs are not designed to support the panels well. Some areas do not get enough sunshine. Some homes do not have big enough roofs to hold enough panels to be worth the effort. In general, proper solar panels raise the value of the home by ...

Most solar panels nowadays are guaranteed to produce at least 75-80% of their nameplate rating after at least 25 years, and the degradation curve for solar panels is nearly flat by that time. From the 25-40 to year period you might expect no more than a few percent of degradation.

Key Takeaways. The national average for solar panels costs about \$16,000. Customers can pay by cash, solar loans, leases and PPAs. If you paid \$16,000 for solar panel installation and used the 30% ...

Is a "Free Nights a Solar Days" energy plan worth it? I'm moving houses and curious if one of these plans is worth the higher kwh price. I can get 18 cents per kwh with free nights(8 PM-5 AM) or a flat 9 cents kwh price. ... use smart meter texas or your current provider's tools to see how much you use at night vs day. then the math can be done.

A place to discuss Tesla Solar Panels, Solar Roof, Power Wall, and related gear. If you're into solar energy, tesla, or cool technology, this is the place for you! ... import 28.7 cents, export 3 cents. According to my Texas Power Guide Report, it is the best option at \$1031 for my usage map. Shell looked better, but not in their report. 0 base ...

People are saying "the loan is 10 years and then the panels are worth nothing" - this is untrue. The panels degrade over time but most have a 25 year warranty on degradation. So, the output of the panel decreases by 0.5% each year, but the cost of electricity increases by 3% - you're still netting 2.5% better return every year.

Doesn't seem worth to me. Texas energy prices are super low. Purchase/install is still expensive enough that

Are solar panels worth it in texas reddit

you won't recoup costs before having to replace panels due to wear/damage. The ...

So I started looking into solar recently and got really excited at first. We got a quote from a pretty large solar installer in the area. They had said in their sales pitch our average monthly electric bill was \$191/mo and with financing we would pay \$234/mo for the panels on a 20 year loan (\$45k for 9.7kwh system)

For most people solar makes sense in this area if you are going to stay in your home for 10+ years, your system is under \$3/watt, and it is 100% or higher offset. Things like north facing panels and having to repair/replace your roof before installing can extend your payback period and not make solar worth it.

Discussion of solar photovoltaic systems, modules, the solar energy business, solar power production, utility-scale, commercial rooftop, residential, off-grid systems and more. Solar photovoltaic technology is one of the great developments of the modern age.

Are solar panels worth it in Texas? Yes, solar panels are worth installing in Texas. In fact, the Global Horizontal Irradiation (GHI) average for Texas is 4.8 kWh/m², making it one of the most adequate locations within the United States for residential solar panel installation. This stands true whether you own or lease your home.
