

Are watch batteries lithium

What is a lithium watch battery?

Lithium watch batteries are a little more odd. Lithium batteries are flat, thin batteries that resemble nickels (see image). The number system on the cell (i.e. 2025, correlates to the size, 20 mm across, and 2.5 mm thick). Lithiums are commonly used for calculators, remote control car starters and of course watches.

Can a lithium watch battery be substituted for a silver watch battery?

Note, that the lithium watch batteries, or button cells, are 3 volts, not 1.5 volts and cannot be substituted for a 1.5 volt silver oxide watch battery or alkaline watch battery, even if the sizes are comparable.

How many volts is a lithium watch battery?

The battery has a running voltage of 1.55 volts which is slightly higher than alkaline batteries. It also has a higher nominal capacity (25-55 mAh) and the cut-off voltage is ~1.2 volts. Lithium watch batteries are either rechargeable or non-rechargeable and primarily 3V batteries.

Which battery is best for a watch?

Lithium Batteries: The powerhouse among watch batteries, they boast a longer lifespan and higher voltage, making them ideal for high-end timepieces. (The Different Types Of Watch Batteries) Knowing how to identify the battery in your watch is crucial, especially when it comes time for replacement. Here's a quick guide:

Where can I buy a watch battery?

Both regular (silver oxide and mercury) and lithium batteries too. Take your watch battery number, look it up on the chart to locate the conversion number. Then go into any jewelry store, or Amazon, and buy one (just about any jewelry store, Walmart, Walgreens, Kroger... sells watch batteries).

Do all watches use the same battery?

Since all watches use a button cell battery (also known as coin cell batteries), it is easy to assume that one size fits all and all watches take the same battery. However, this is not the case and in fact, there are many different types of watch batteries.
