

Azure backup power bi

Does Azure backup have Power BI?

Azure Backup now provides reports by using Power BI. These reports provide the ability to gauge backup health, view restore trends, and understand storage usage patterns across subscriptions and across vaults. More important, you have the power to generate your own reports and build customizations by using Power BI. Here are the key benefits:

What is a Power BI backup feature?

This Power BI feature closes an important gap to Azure AS. You can backup Power BI datasets on a regular basis to meet the data retention and disaster recovery requirements of your organization. You can also use this feature to migrate enterprise BI workloads from Azure AS to Power BI.

How do I upload data from PowerBI to Azure backup?

To do so, click Sign in. In the PowerBI portal, search for Azure Backup, select the Content Pack and then click connect. Enter the same storage account name that you configured for Azure Backup Reporting, and then provide the storage account key for authentication. Click Sign in and the data will start to upload.

What are azure backup reports?

For more information, see the Azure Backup blog and documentation. Azure Backup reports through Power BI provide the ability to gauge backup health, view restore trends, and understand storage usage patterns across subscriptions and across vaults.

How do I access Azure backup reports if I already have a PowerBI account?

If you already have a PowerBI account, you can go to Azure Backup portal, first you need to go Settings blade and then select Backup Reports under MONITORING AND REPORTS as shown in the following screenshot:

Does Power BI support backup & restore?

There's no backup or restore facility or option in the Power BI user interface. Because of the XMLA dependency, Backup and Restore currently requires your semantic models to reside on a Premium or PPU capacity. The storage account settings for Backup and Restore can be applied at either the tenant or the workspace level.

After all, the faster you can backup and restore your datasets in Power BI, the more you can minimize downtime in critical situations and uphold your service level agreements (SLAs). Of course, better performance also helps with backup and restore based migrations of Azure Analysis Services (AAS) datasets to Power BI.

Power BI Premium, also a cloud offering, is an add-on to any Power BI Pro deployment to enable content consumption for large user bases without buying individual licenses for each consumer. Power BI Premium

Azure backup power bi

also offers additional controls, options, and capabilities, including access to Power BI Report Server for on
