

Homebuilders have continued to improve the efficiency of their homes, as shown by scores from the Home Energy Rating System Index. TBD contributor Ryan Meres spotlights some new-home construction trends from the latest HERS data.

Belgium plans to increase its photovoltaic (PV) capacity to 33.6 GW by 2035 as part of its draft national energy and climate plan (NECP). This plan outlines the country's strategies for ...

The report highlights that while renewable-energy and energy-efficiency contributions now closely align with the bloc's 42.5 percent and 11.7 percent 2030 targets, respectively, distortions remain across sectors.

Energy efficiency: reduce the amount of energy required to provide products and services Energy security: to create an energy mix based on flexible capacity, load shifting, storage and renewable energy

"A critical enabler of the ongoing transition is the accelerated development of flexibility across the entire Belgian energy system. From consumer-side response and storage to controllable ...

In 2024, France increased its cross-border electricity deliveries by 48%, from 70 terawatt-hours (TWh) in 2023 to 103 TWh in 2024. France's electricity exports to Belgium and Germany ...

Fixing Belgium's energy conundrum Belgium relies on imported fossil fuels for much of its energy supply, a precarious condition given its hopes for the green transition and concerns about energy security. The country is ...

Discovering the right heat pump settings for summer can significantly reduce your energy bills and boost indoor comfort during the hottest months. Many American homeowners are turning to ...

It is crucial for these companies to optimise their energy efficiency and explore innovative ways to reduce their carbon footprint. What makes this approval even more relevant is the broader context of Belgium's recovery plan.

With the "green energy transition" high on the international agenda as world leaders convene at COP28 to discuss how to overhaul global energy systems and cut dependence on fossil fuels, momentum is growing to invest ...

Belgium energy efficiency

Abstract Purpose - This study explores the impact of energy efficiency on rental prices with advanced predictive modeling techniques. It aims to analyze the evolution of energy ...

Whilst Belgium is now able to meet over 20% of its electricity needs through wind and solar, removing fossil fuels from the mix would make the country vulnerable to periods of reduced renewable production.

The National Energy and Climate Plan focuses on the Belgian ambitions to transition towards a low-carbon society. To achieve this, both national and The National Energy and Climate Plan focuses on the Belgian ...

Belgium's electricity network is well-connected with its neighboring countries, which include France, the Netherlands, Germany, and Luxembourg. This interconnectivity is a key aspect of the country's energy strategy. Through ...

Wallonia - Advancing Sustainable Agriculture and Energy Efficiency Wallonia has prioritized sustainable agriculture and energy efficiency as crucial pillars of its green transition. The region has invested EUR1 billion in sustainable ...

Purpose - This study explores the impact of energy efficiency on rental prices with advanced predictive modeling techniques. It aims to analyze the evolution of energy efficiency's role in ...

Belgium is projected to reach around 33.6 GW of installed PV capacity by the end of 2035, according to a new report from Belgian grid operator Elia. The country is also predicted to see ...

Welcome to ENGIE Belgium ! Every day we develop energy-efficient solutions and build a carbon-neutral future! Every year we offer students the chance to do an internship at ENGIE Belgium ...

Traditional battery storage faces limitations in scalability and environmental impact. Heliosphere's technology utilizes a novel thermal energy storage system, leveraging molten salt to store ...
