Firefox is the last major browser standing that has a completely different code base and engine. (I discount Safari here not because it shares some code with Chromium --it's not Chromium based-- but because it's not competing on all platforms.) Diversity in tech and developer philosophy matters for a healthy browser landscape. Reply reply ...

Tesla has trucked in batteries to beef up the performance of its EV Supercharging stations during times of peak demand. The batteries are a mobile version of a battery energy storage system, or BESS.

I've tested Chrome, Brave and Firefox regarding their actual RAM consumption when opening three different news sites (CNN, Fox, HuffPost). While RAM consumption may vary depending on how resource hungry sites actually are, those benchmarks are reflecting my overall experience I've made with those setups during the last few weeks.

The only browser I hadn't tried yet was Firefox, but I had heard a lot about it (seriously, guys, you sound like a cult, calm down a bit) and so I decided to try it, who knows, maybe I would find a hidden gem.

Firefox doesn't do that. The navigation power is also built deep into the underlying engines. Firefox is also, still, capable of supporting extensions that are far more powerful than what's possible in Chrome. The rise of Chrome killed off the commercial viability of a lot of incredible extensions that couldn't be ported to Chrome.
