

Benefiting from renewable energy (RE) sources is an economic and environmental necessity, given that the use of traditional energy sources is one of the most important factors affecting the economy and the ...

Hydrogen (H<sub>2</sub>) has emerged as a clean and versatile energy carrier to power a carbon-neutral economy for the post-fossil era. Hydrogen generation from low-cost and renewable biomass by ...

The present installed power generation capacity of India is over 334 GW, of which renewable energy (RE) contributes 18.8% (Hussain et al. 2017a; CEA 2018). Further, the typical capacity utilization factors of stand ...

the solar power production is maximum at day when power requirement is low and when required the most the power generation is at low or nothing. So, for rectifying this issue we designed a ...

The hybrid energy sources consist of the solar photovoltaic power plant, biomass gas generator plant, utility power grid (which may have been connected or disconnected from the hybrid renewable energy system), ...

This study presents an in-depth review of the latest advances in integrating solar and biomass energy in power plants and summarizes and discusses the past effort and the current status of...
