Is microgrid a viable business model in India?

Microgrid are highly acceptable and has high adherence to Indian local regulations. Similarly, RESCO and Utility resellers are part of Indian PV business model. Non-profit and crowdfunding business model supports revenue model for both consumers and intermediaries and schemes GNM and VNM are feasible options are per Indian local regulations.

What drives microgrid development?

Resilience, efficiency, sustainability, flexibility, security, and reliability are key drivers for microgrid developments. These factors motivate the need for integrated models and tools for microgrid planning, design, and operations at higher and higher levels of complexity.

Are off-grid PV business models a viable option in Sub-sahara Africa?

For instance, Moner-Girona et al. (2018) has shown that, for off-grid PV business models in Sub-Sahara Africa, there is a need to improve the supporting regulatory and institutional framework, and to reduce transaction costs for rural electrification using such business model.

What is a shared photovoltaic business model?

Shared Photovoltaic (PV) business models enable a broader percentage of consumers to benefit from renewable energy because installation and transaction costs are significantly decreased.
