By selling their excess power to the grid, homeowners accumulate credit that can be used to offset the power they draw in at night when the solar panels aren't producing power. When a solar system is paired to a battery, homeowners have the option to use their extra electricity to charge up their battery instead of sending it back the grid.

A solar battery can help you save money if your utility has demand charges, time-of-use rates, or doesn't offer net metering. By storing solar electricity onsite in a battery, you can avoid pulling expensive electricity from the grid when your solar panel system isn't generating enough power to meet your needs (like at night).

**DIY Solar Panels Cost.** One of the biggest reasons people choose to install solar panels on their own is that it saves money on the labor costs of hiring a professional solar installation company ...

Here's a quick list of the equipment you get when you go solar: Solar panels: Capture energy from the sun. Inverter(s): Converts solar energy into energy that your home can use. Racking equipment: Mounts solar panels to ...
