Why do solar panels have to be connected to the grid?

Solar panels have to be connected to the grid because the solar inverter changes solar power into grid power. A piece of solar kit sits in between them: the solar inverter. Solar inverters change solar electricity into grid electricity. The grid provides a consistent, reliable source of power that can be used when the sun isn't shining.

Can a grid tie inverter power a solar panel?

After connecting the inverter, an outlet can be attached to it. You may then put an AC-powered gadget into the outlet and have it fueled by the solar panel. You could have a dedicated plug designed only for the solar panels that the grid tie inverter plugs into. Plug-in solar panels: why are they so appealing?
