

# Can you generate solar power when traveling

Should I travel with a solar generator?

When traveling with a solar generator, you should also consider the guidelines provided by the Transportation Security Administration (TSA) in the United States or the relevant aviation authority in your country.

Can You Fly with a solar generator?

Solar generator manufacturers use lithium-ion batteries to make them lightweight. Instead of solar panels, you can also charge them with an AC socket, gas generator, or Car DC socket. When it comes to flying with a solar generator, the battery size and capacity are critical factors to consider.

Can I fly with voltaic solar panels?

All of our systems and batteries are approved to fly on international and domestic flights. Since Voltaic solar panels are separate from our battery packs, these rugged panels do not face any regulation and can be stored in your checked or carry on bag.

Can I fly with solar chargers & battery packs?

Whether you're flying domestically or planning a trip overseas, we've put together a list of tips to make traveling with solar chargers and battery packs less stressful. All of our systems and batteries are approved to fly on international and domestic flights.

Can you use a solar charger on a commercial airplane?

Most commercial airplanes are not equipped with solar panels, and therefore would not be able to generate the power needed to charge a device using a solar charger. Additionally, the use of personal electronic devices is typically prohibited during takeoff and landing, and may be restricted during travel as well.

Can a solar charger charge a plane without a battery?

If your solar charger has a battery pack, you may connect the battery to a plane's built-in USB port. However, if you only rely on sunlight to charge your gear without a battery, it won't work. It's also vital to check that your charger's battery is compatible with the USB charger you're using.
