A door lock actuator is the component in electronic door locks that is responsible for locking and unlocking the vehicle's doors. When a button is pressed to lock or unlock a door, the door lock switch triggers the actuator.

­ In this car, the power-door-lock actuator is positioned below the latch. A rod con­nects the actuator to the latch, and another rod connects the latch to the knob that sticks up out of the top of the door. When the actuator moves the latch up, it connects the outside door handle to the opening mechanism.
