Why does my Chevy Equinox have service power steering?

Experiencing a "Service Power Steering" message in your Chevy Equinox can be frustrating. This message often points to problems like low fluid or a faulty pump in your steering system. Fixing it might seem tough, but understanding common causes and solutions can help.

How do you know if you have hydraulic power steering problems?

In vehicles with hydraulic power steering, issues might relate to low fluid levels or leaks. You might also experience a stiffer steering wheel or notice unusual noises when turning. It's important to address these signs promptly to avoid more significant problems.

How do I check my power steering fluid level?

Regularly checking your power steering fluid level is a simple yet crucial step. Begin by locating the power steering reservoir under the hood. Most reservoirs have a dipstick attached to the cap for easy measurement. Make sure the fluid level is between the "min" and "max" marks when the vehicle is off and on a level surface.

Is there a recall on the power steering system?

There was a recall on the power steering system back in 2015 model year, but they supposedly corrected the issues. You may want to let your dealer service dept. know and start documentation on a complaint. If it doesn't happen again, good. But if it does happen again, you can leave a paper trail. How do I know if my Chevy Cruze has power steering problems?

Your Chevy Cruze may face power steering issues if the fluid level is low. Start by locating the power steering fluid reservoir, which is typically near the engine. The cap will have markings indicating the proper fluid level. Use the dipstick attached to the cap to check the fluid level. It should be between the "min" and "max" marks.

Why does my Chevy Malibu have a power steering problem?

Often, the cause of the power steering problem may relate to a failure in the electronic components. Many Chevy Malibu models are equipped with an electric power steering system (EPS). Unlike traditional hydraulic systems, EPS doesn't rely on fluid but employs electric motors to assist in steering.

The power steering pump pressurizes and circulates power steering fluid through the power steering hydraulic system, allowing the steering wheel to turn with greater ease. This leaves many locations where leaks can occur, and when they do, the system will need to be inspected to discover the source of the leak and recommend a repair.
