

Trafc Anomaly Detection Via Conditional Normalizing Flow Zhuangwei Kang, Ayan Mukhopadhyay, Aniruddha Gokhale, Shijie Wen y, Abhishek Dubey Institute for Software Integrated Systems, Vanderbilt ...

The power of Normalizing Flow, however, is most apparent in their ability to model complex high-dimensional distributions with neural networks and Pyro contains several such flows for accomplishing this. Transforms that operate on vectors have the property `transform.event_dim == 1`, transforms on matrices with `transform.event_dim == 2`, and so on.

2. Normalizing Flows We begin by outlining basic de nitions and properties of normalizing ows. We establish the expressive power of ow-based models, explain how to use ows in practice, and provide some historical background. This section doesn't assume prior familiarity with normalizing ows, and can serve as an introduction to the eld.

A. Normalizing Flow Normalizing ows dene a series of bijective transforma-tions that can transform the probability density  $p_X(x)$  of a random variable  $X \in \mathbb{R}^D$  to a well-known base distribution  $p_Z(z)$  dene by a random variable  $Z \in \mathbb{R}^D$  [25]. The random variable  $Z$  is chosen such that it has an explicit probability density function. The problem of ...

Normalizing Flows (NFs) are able to model complicated distributions  $p(y)$  with strong inter-dimensional correlations and high multimodality by transforming a simple base density  $p(z)$  through an invertible neural network under the change of variables formula. Such behavior is desirable in multivariate structured prediction tasks, where handcrafted per-pixel loss-based ...

The existing conditional normalizing flows [11], [17], [20], [21] suffer from insufficient feature information extraction and limited network expression ability. For this purpose, we propose an Unbalanced Points-guided multi-scale Transformer-based conditional normalizing Flow (UPT-Flow) for low-light image enhancement.

Overview. This paper presents a new method called &quot;conditional normalizing flows&quot; for efficiently mapping phase diagrams in complex systems. The approach combines the power of normalizing flows, a type of generative model, with the ability to incorporate domain knowledge through conditioning.; The authors demonstrate the effectiveness of their method ...

Abstract: Conditional normalizing flow (CNF) performs a series of reversible transformations to learn the distribution of the normal-light image guided by conditional features from the low-light image, providing a novel solution for low-light image enhancement. However, most existing CNF-based methods completely adopt convolutional neural networks (CNN) to extract conditional ...

A specialized scenario generation method that utilizes forecast information to generate scenarios for day-ahead scheduling problems by sampling from a conditional distribution that uses wind speed forecasts to tailor the scenarios to a specific day. We present a specialized scenario generation method that utilizes forecast information to generate scenarios for day ...

A data-driven approach for probabilistic wind power forecasting based on conditional normalizing flow (CNF), which is distribution-free and can directly yield continuous probability densities, hence avoiding quantile crossing. We present a data-driven approach for probabilistic wind power forecasting based on conditional normalizing flow (CNF). In contrast ...

2020-07-15 - Faster Uncertainty Quantification for Inverse Problems with Conditional Normalizing Flows by Siahkoochi, Rizzuti et al. Uses conditional normalizing flows for inverse problems. 2020-06-25 - SRFlow: Learning the Super-Resolution Space with Normalizing Flow by Lugmayr, Danelljan et al. Uses normalizing flows for super-resolution.

Power Forecasting: A Conditional Normalizing Flow Approach Honglin Wen, Student Member, IEEE, Pierre Pinson, Fellow, IEEE, Jinghuan Ma, Jie Gu, and Zhijian Jin Abstract--We present a data-driven approach for probabilistic wind power forecasting based on conditional normalizing flow (CNF). In contrast with the existing, this approach is

A deep generative model for probabilistic energy forecasting in power systems: normalizing flows Jonathan Dumasa., Antoine Wehenkela, Damien Lanaspzeb, Bertrand Cornelusse; a, Antonio Sutera aLieg` e University, Departments of Computer Science and Electrical Engineering, Belgium bMines ParisTech, France Abstract Greater direct electrification of end-use sectors ...

In this work, we introduce Conditional Flow Variational Autoencoders (CF-VAE) using our novel conditional normalizing flow based prior to capture complex multi-modal conditional distributions for effective ... conditional normalizing flow based priors In order to model complex multi-modal conditional distributions over sequences. In Figure 1 ...

Showing how conditional normalizing flow models can be used to represent a continuous stochastic policy, i.e. distributions over actions that are conditioned on the current state of the agent. Demonstrating their effectiveness in two multi-agent learning contexts: 1. Imitation learning in multi-agent multi-modal behavior modeling. 2.

This paper presents to the power systems forecasting practitioners a recent deep learning technique, the normalizing flows, to produce accurate scenario-based probabilistic forecasts ...

Deep Learning has been increasing the capabilities of Artificial Intelligent systems rapidly in many emerging

# Conditional normalizing flow for power systems

areas like video analytics, data analytics and autonomous systems. ...  $(x_A; \gamma(x_B))$ ,  $x_B$  (10) where  $\gamma(x_B)$  is any arbitrary function which uses only  $x_B$  as input. The power of a coupling flow resides, largely, in the ability of  $\gamma(x_B)$  ...

Low-light image enhancement algorithms have been widely developed. Nevertheless, using long exposure under low-light conditions will lead to motion blurs of the captured images, which presents a challenge to address low-light enhancement and deblurring jointly. A recent effort called LEDNet addresses these issues by designing an encoder-decoder ...

We present a data-driven approach for probabilistic wind power forecasting based on conditional normalizing flow (CNF). In contrast with the existing, this approach is distribution-free (as for ...

$g, E$ ) as a conditional normalizing flow [10], and use the resulting distribution as a sampling distribution for control sequences. Our method uses a VAE to encode an environment SDF into an environment embedding  $h$ . This environment embedding is used along with the start and goal as the input to a conditional normalizing flow, which

Power Forecasting: A Conditional Normalizing Flow Approach Honglin Wen, Student Member, IEEE, Pierre Pinson, Fellow, IEEE, Jinghuan Ma, Jie Gu, and Zhijian Jin Abstract--We present a data-driven approach for probabilistic wind power forecasting based on conditional normalizing flow (CNF). In contrast with the existing, this approach is

We present a data-driven approach for probabilistic wind power forecasting based on conditional normalizing flow (CNF). In contrast with the existing, this approach is distribution-free (as for ...

The left, center-left, center-right, and right columns show historical scenarios and scenarios sampled from the conditional normalizing flow, the Gaussian copula, and the W-GAN, ... A deep generative model for probabilistic energy forecasting in power systems: Normalizing flows. Appl. Energy (2022) Leo E. et al. Stochastic short-term integrated ...

This paper presents to the power systems forecasting practitioners a recent deep learning technique, the normalizing flows, to produce accurate scenario-based probabilistic forecasts that are crucial to face the new challenges in power systems applications. The strength of this technique is to directly learn the stochastic multivariate ...

for large systems or systems with very large energy barriers. The preprint by Zhang et al. (2023) used a conditional normalizing flow for a coarse-graining task without active learning, however no benchmarks or implementation details are available. We solve the aforementioned challenges by ...

In particular, we use normalizing flows to generate wind power generation scenarios by sampling from a
