What causes crystalline silicon photovoltaic (PV) cells to crack?

IEEE J Photovoltaics. 2022. Various cell crack modes (with or without electrically inactive cell areas) can be induced in crystalline silicon photovoltaic (PV) cells within a PV module through natural thermomechanical stressors such as strong winds, heavy snow, and large hailstones.

Does a crack in a photovoltaic module affect power generation?

This paper demonstrates a statistical analysis approach, which uses T-test and F-test for identifying whether the crack has significant impact on the total amount of power generated by the photovoltaic (PV) modules. Electroluminescence (EL) measurements were performed for scanning possible faults in the examined PV modules.

What causes cell cracks in PV panels?

1. Introduction Cell cracks appear in the photovoltaic (PV) panels during their transportation from the factory to the place of installation. Also, some climate proceedings such as snow loads, strong winds and hailstorms might create some major cracks on the PV modules surface , , .

How a crack in a PV cell affect the output power?

Diagonal cracks and multiple directions cracks always show a significant reduction in the PV output power . Moreover, the PV industry has reacted to the in-line non-destructive cracks by developing new techniques of crack detection such as resonance ultrasonic vibration (RUV) for screening PV cells with pre-existing cracks .

Why do photovoltaic systems crack more often?

Such faults happen more frequently due to the already mentioned price reduction efforts of the manufacturers. ... The most sensitive component of a photovoltaic (PV) system is the solar cell, which can be prone to cracking as a result of various manufacturing processes and operating conditions [1,2].

What happens if a PV module cracks?

These cracks may lead to disconnection of cell parts and, therefore, to a loss in the total power generated by the PV modules . There are several types of cracks that might occur in PV modules: diagonal cracks, parallel to busbars crack, perpendicular to busbars crack and multiple directions crack.
