Most of the time (under normal home theater listening conditions), an amplifier outputs just 1 to 10 watts across most frequencies for a comfortable listening experience. Extreme low frequencies require more power to produce a desirable listening level but you may not need as much as you think.

The question. What is a good wattage for a home theater? At A Glance: As a general rule of thumb, If your room is small then a 525 Watts RMS speakers setup will be good, if your room is of medium size then a 650 Watts RMS is good, and for a large room a 940 Watts RMS power is enough. Keep reading to know the exact dimensions for each size of room.

800 Watts Peak Power: Home theater system speakers can reach up to 800 watts of power, 6.5 inch Subwoofer with built-in receiver, high volume but with professional sound quality and excellent bass sound, deliver the cleanest, most natural sound possible. ... and has LED lighting effect and digital display function.
