

What is a DALI control panel?

The DALI control panel provides complete control of pre-programmed lighting scenes within a DALI lighting control system. The adaptable design allows you to choose from a range of button combinations, which can be fitted and changed at any time.

What is a DALI lighting system?

DALI system is used to control lighting in large commercial and residential areas where lighting automation is required. DALI provides the flexibility to control individual as well as grouped lighting systems. All this is done by a central control unit which gives access to all the luminaires of the building at your fingertips.

How do I install a lighting control system with a Dali interface?

Installation of a lighting control system with a DALI interface must be done in accordance with applicable local building and electrical codes. Compared with the 0-10V interface, the DALI control line requires no other electrical installation tool, auxiliary device, or measuring and testing equipment.

What control devices are used in a DALI lighting control system?

Here are some of the control devices commonly used in a DALI lighting control system: DALI Controllers: DALI controllers manage the DALI lighting control system. They enable the user to control the lighting system, create and modify lighting scenes, and adjust the lighting levels.

How do I control the lighting in Dali?

Only DALI can offer such extensive control. Switching lighting presets: You can feed various lighting presets in the DALI system and switch between them with just a button. For example, you can create custom lighting for parties or meetings and alternate between them whenever you want.

What is DALI protocol?

DALI is a protocol specifically designed for lighting control. It allows individual control of each light fixture and supports two-way communication between the control device and the institution. DALI is considered more precise and flexible than other lighting control systems, such as 0-10V and DMX.
