

Dell the watchdog timer power cycled the system

What if the watchdog timer expired?

Event Message: The watchdog timer expired. Detailed Description: The operating system or potentially an application failed to communicate to the baseboard management controller (BMC) within the timeout period. Recommended Action: Check the operating system, application, hardware, and system event log for exception events.

Why does my watchdog timer keep turning off?

This error is caused because the system stopped responding and the hardware watchdog triggered a system reset. Based on what I read already, the watchdog timer is supposed to turn the computer off if it fails to respond for long enough (such as by getting stuck in an infinite loop). I want to know why it's doing this, though...

What is a watchdog timer?

This package contains the Dell Watch Dog Timer application. Watchdog Timer provides a mechanism to reboot the system when it stops responding. This application provides a user interface to monitor Watchdog Timer setting in BIOS and driver status. Want to look up your product? Enter a product identifier. Show me how - Initial Release.

How do I disable a watchdog timer?

"What's a watchdog timer" Use the steps below to disable the Dell Watchdog Timer Application: Press F2 at the Dell splash screen to enter system setup Click Maintenance Select Watchdog Timer Support Select the Disable Watchdog Timer checkbox Click Apply and Exit.

How do I re-enable watchdog timer?

Press F2 at the Dell splash screen to enter system setup Click Maintenance Select Watchdog Timer Support Select the Disable Watchdog Timer checkbox Click Apply and Exit. As it states that the watchdog function needs to be disabled during reimage (initial rollout) I guess this is the final step to re-enable it.

What is BMC watchdog timer?

DCMI v1.0/Node Manager v1.5. The BMC watchdog timer commands, as defined in the IPMI v2.0 specification, are part of the Intelligent Platform Management Interface. The watchdog timer can restart, turn off, or cycle power to your server in your absence to support automatic system recovery functions.

Solution. Dell EMC Engineering is aware of this issue and has released the iDRAC firmware 3.21.21.21.22 to solve this issue. Download link of the latest iDRAC firmware version is available on this page. Systems require a reboot of the server after the update to effectively apply the firmware and resolve this condition. M640 & FC640 require a physical or virtual reset ...

Dell the watchdog timer power cycled the system

To keep a watchdog timer from resetting your system, you've got to kick it regularly. But that's not all there is to watchdog science. We will examine the use and testing of a watchdog, as well as the integration of a watchdog into a multitasking environment. Making proper use of a watchdog timer is not as simple as restarting a counter.

However, if OMSA's Automatic System Recovery (ASR) feature is enabled for the watchdog to issue a power action, DRAC will indeed reboot or power cycle the entire system. Therefore it is strongly recommended to leave the ASR feature disabled. Dell Engineering will address this eventing issue with OMSA 7.4 releasing in March.
