

# Depreciation rate of photovoltaic panels

What is depreciation rate for solar panels?

Depreciation Rate is the percentage rate at which the asset loses its value annually. Let's assume you're a business owner in India who purchased solar panels for INR10,00,000. The Income Tax Department has determined that the depreciation rate for solar panels is 15% per annum. Using the formula: Depreciation =  $\text{INR}10,00,000 \times 0.15$

What is commercial solar depreciation?

Understanding Commercial Solar Depreciation in Solar Power Projects Depreciation is an accounting principle enabling businesses to distribute the cost of a tangible asset over its anticipated lifespan. As components like solar panels and inverters age, their value diminishes.

Can a business depreciate a solar system?

Through depreciation, businesses can: Any business with solar power can use commercial solar system depreciation. While expense depreciation can take a few different forms, special rules apply to solar panels. Because the federal government seeks to incentivize businesses using solar technology, it offers a desirable depreciation schedule.

How does solar panel depreciation affect resale value?

Depreciation can also impact the resale value of solar panels. As PV modules age and lose efficiency, their market value diminishes. However, understanding and managing solar panel depreciation can help maintain a higher resale value.

How much depreciation can a solar power plant deduct?

A solar power plant that has been operational for fewer than 180 days during a fiscal year is eligible for half of the above-mentioned depreciation rate for the whole year. So, in percentage terms, the owner of a solar asset may deduct 30% of its cost (60% / 2).
