What is power digitalization?

The power digitalization process is based on the collection of energy usage, power quality, and electrical asset performance data. There are many different types of devices, such as PowerTag wireless energy sensors, that measure energy consumption and make power measurements available via communication protocols.

Is power digitalization a good investment?

Retrofitting electrical systems with smart devices and using power management software to improve energy efficiency and reduce risk is a great investment with a typical payback of less than two years. The power digitalization process is based on the collection of energy usage, power quality, and electrical asset performance data.
