What is home energy storage?

Home energy storage systems allow households to charge their EVs with clean, self-generated electricity. The integrated energy storage unit provides safe, reliable and efficient power management. The residential energy storage market in the EMEA region is expected to exceed \$3.5 bn accumulated sales by 2025.

How do you store energy?

You can store electricity in electrical batteries, or convert it into heat and stored in a heat battery. You can also store heat in thermal storage, such as a hot water cylinder. Energy storage can be useful if you already generate your own renewable energy, as it lets you use more of your low carbon energy.

Which UK battery storage projects will be commercially operational in 2024?

Energy storage developer Eku Energy is building two UK battery storage projects - with a combined capacity of 130MWh - in Basildon, Essex and Loudwater, Buckinghamshire. Both projects are expected to be commercially operational by the end of 2024.

What are Europe's 'two biggest battery storage facilities' in central Scotland?

In January 2022, Amp Energy revealed plans for what it described as Europe's "two biggest battery storage facilities" in central Scotland. The 800 MW battery portfolio, called the 'Scottish Green Battery Complex', will comprise two 400MW battery facilities - in Hunterston and Kincardine - and provide 800MWh of energy storage capacity.
