Traxxas Monster Truck forum - T-Maxx won't move? - Hey guys. As some of you may know, I have been out of the hobby for a few years and just got my truck back. I'm somewhat of a noob, and haven't really messed with transmissions or taking apart engines just yet but I'm pretty solid in other aspects of the vehicles.

Hello, just installed an H& S Mini Maxx with dpf delete and everything has run fine for just over a week. The tunes H& S supply for the 6.7 really woke up its potential and I am thoroughly pleased with the overall performance of the 5" SS MBRP and S& B Combo.

You can use a voltmeter to check the voltage of your batteries, or you can use the Traxxas Link app if your car has a telemetry system. Depending on how many cells your battery has, the recommended voltage for most Traxxas cars is between 7.2V-9.6V for NiMH batteries and 7.4V-14.8V for LiPo batteries.

This is a battery powered system and is limited to the power provided by the batteries. The following

E maxx truck power won t stay in your system

directions are intended to assist you in extending the systems operating time and your comfort. 1. Precondition the cab and sleeper: utilizing the normal truck heating and air conditioning to precondition the truck

Monster Trucks - e-maxx brushless conversion question - i have an emaxx 16.8 2.4 ghz edition. i am wanting to upgrade it to the waterproof brushless sec & motor combo. my question is if i still run nihm instead of lipo i can only use one battery pack with this set up. how will that compare to the torque, power, and

Oh man. That"s what mine was doing. You have a short somewhere in the can/bus system and its not letting anything communicate. The mini maxx is froze because its locked out too. Even ford IDS won"t be able to get in. Unplug the batteries and totally unplug the mini maxx from the obd II port. Leave it sit for a while and hook the batteries back up.
