What are the components of a power system?

In a power system,the generator or alternator is the important element(1.4.1). It converts mechanical energy into electrical energy. The generator consists of two main parts: the stator and the rotor.

What is unbalanced operation in a power system?

Under the unbalanced operationof a power system,all three phases must be shown for currents and voltages. A single line diagram is insufficient. The power system consists of various elements including a generator,transformer,transmission lines,bus bars,circuit breakers,and isolators.

The importance of electric motors is well known in the various engineering fields. The book provides comprehensive coverage of the various types of electric motors including d.c. motors, three phase and single phase induction motors, synchronous motors, universal motor, a.c. servomotor, linear induction motor and stepper motors. The book covers all the details of ...

The book is written for an undergraduate course on the Feedback Control Systems. It provides comprehensive explanation of theory and practice of control system engineering. It elaborates various aspects of time domain and frequency domain analysis and design of control systems. Each chapter starts with the background of the topic. Then it gives the conceptual ...
