A good test of the panels, and the overall installation is that under very good solar conditions the peak maximum output should be close to rating of the panels. Often this peak reading will only be brief, typically as the sun comes out of cloud (the cloud edge effect), but this provides confirmation that everything is working as should do.

The solar panel durability depends on the materials used for the solar panel and framing. Certain types of resilient plastic are used to protect solar cells from dust and moisture. For example, ETFE plastic is a standard in high-end products and provides better durability and light transmission than cheaper PET and PTE materials. Also, keep in ...
