

# Energy Storage System Procurement Contract Documents

How do energy storage contracts work?

For standalone energy storage contracts, these are typically structured with a fixed monthly capacity payment plus some variable cost per megawatt hour (MWh) of throughput. For a combined renewables-plus-storage project, it may be structured with an energy-only price in lieu of a fixed monthly capacity payment.

What are the different types of procurement contracts?

There are three key types of procurement contracts--power purchase agreements (PPAs) or energy storage services agreements; engineering, procurement, and construction (EPC) agreements; and build-transfer agreements (BTAs)--and several key risks that must be allocated between the parties.

What is a battery energy storage system checklist?

Checklist provides federal agencies with a standard set of tasks, questions, and reference points to assist in the early stages of battery energy storage systems (BESS) project development.

What are the challenges of procurement for utility-side storage & solar-plus projects?

The challenges of procurement for utility-side storage and solar-plus projects center largely on early-stage decisions: defining the top-priority use case, but also exploring ways to get more value out of the project and to prepare for market changes over its life.

What are the implications of a combined renewables-plus-storage project?

There will be important implications for a combined renewables-plus-storage project depending upon whether the project is DC coupled or AC coupled. For example, AC coupled systems are generally viewed as being simpler since the renewable energy storage can be connected separately with AC power.

Can energy storage resources be financed on a nonrecourse basis?

Key Finance-ability Provisions: Energy storage resources may also be financed on a nonrecourse basis and, like any other project financed in such manner, will need to address issues upon which nonrecourse lenders will focus, including assignment, events of default, performance requirements, key dates, and collateral.

There are three key types of procurement contracts--power purchase agreements (PPAs) or energy storage services agreements; engineering, procurement, and construction (EPC) agreements; and build ...

investment in Longer Duration Energy Storage, is that they are finding that existing revenue streams still leave them with a "missing money" element. o There may be a need for an LDES ...

Battery Energy Storage System Procurement Checklist This checklist provides federal agencies with a standard set of tasks, questions, and reference points to assist in the early stages of battery energy storage
