

Explain different types of system

Types of DBMS Architecture There are several types of DBMS Architecture that we use according to the usage requirements. 1-Tier Architecture 2-Tier Architecture 3-Tier Architecture 1-Tier Architecture In 1-Tier ...

In the operating systems two types of fragmentation are: Internal fragmentation: Happens when fixed-sized memory blocks are allocated to processes larger than needed, leaving unused space within the allocated block.

Network topology refers to the arrangement of different elements like nodes, links, or devices in a computer network. Common types of network topology include bus, star, ring, mesh, and tree topologies, each with its ...

A process is the instance of a computer program in execution. Scheduling is important in operating systems with multiprogramming as multiple processes might be eligible for running at a time. One of the key ...

A system call is a procedure that provides the interface between a process and the operating system. It is the way by which a computer program requests a service from the kernel of the operating system. Different operating ...

Classification of Software Requirements is important in the software development process. It organizes our requirements into different categories that make them easier to manage, prioritize, and track. The main types of Software ...

In distributed systems, transparency plays a pivotal role in abstracting complexities and enhancing user experience by hiding system intricacies. This article explores various types of transparency--ranging from ...

Here, below list of different types of operating systems, which are used in computer. Describe each one. In the Batch processing operating system, all jobs (tasks) are executed in series nature on the computer system without ...

In this article, we are going to discuss fragmentation in detail along with its type, working, role, advantages, and disadvantages. What is Fragmentation in an Operating System? An unwanted problem with operating ...

In cellular telecommunications, the terms handover or handoff refers to the process of transferring an ongoing call or data connectivity from one Base Station to another Base Station. When a mobile moves into a different ...

Software refers to the collection of programs, data, and instructions that enable computers to instruct hardware

Explain different types of system

to perform specific tasks. There are three types of software i.e. System software, application software, and ...

Artificial Intelligence refers to something which is made by humans or non-natural things and Intelligence means the ability to understand or think. AI is not a system but it is implemented in the system. There are many different ...

The operating system functions like a manager of all the available resources. Therefore operating system is defined as an interface between the system and the user. There are various types of operating systems such as ...

Interrupts play a crucial role in computer devices by allowing the processor to react quickly to events or requests from external devices or software. In this article, we are going to discuss every point about interruption and its ...

What are the different types of operating systems? Hadoop is an open-source OS designed to process big data using multiple nodes in a distributed network. IoT devices and many household devices contain ...

Explain different types of system
