

# Homemade Ice Cream Solar Panel

Can ice cream be cooled with biomass heat & ammonia?

We're now using sustainable energy sources - biomass heat and ammonia, a natural refrigerant gas with no climate warming threat to cool our ice cream and store it. It's a first for Scotland, an innovative mix of technology, combining an ammonia plant and an absorption chiller to cool with heat from a new biomass boiler.

Why do we make our ice cream the greenest in the world?

We generate twice as much energy as we use and are a huge step closer to achieving our goal of self-sufficiency in renewable energy, with the aim of making our ice cream the greenest in the world! Here's how we make our ice cream from Sky to Scoop. Scotland is one of the windiest places in Europe!

Why do we make our own ice cream packaging?

High speed and high pressure - the mould locking pressure is 240 tonnes - about 40 African elephants! Making our own packaging means that we reduced our carbon miles- it saved 50,000 miles of transport per year from our former supplier - now it is only 200m from our packaging store over to the ice cream dairy.

New solar panels installed at Solley's Kentish Ice Cream in Deal with a £10,000 green energy grant from Dover District Council mean that the business has enough power to run all of its freezers from the sun.
