

# Hong Kong wind curling rod design

What is the Wind Code of Hong Kong?

wind code of Hong Kong, Code of Practice on Wind Effects in Hong Kong 2004 (HK Wind Code 2004), so as to more accurately reflect the site wind characteristics in different regions of Hong Kong. Mean wind speed profile and turbulence intensity profile for three terrain categories,

What is a code of practice on wind effects in Hong Kong?

Recently, "Code of practice on Wind Effects in Hong Kong 2019" was launched by Buildings Department for practical design in Hong Kong. The structural engineers should calculate the wind loads with consideration of more effects such as across wind, torsional wind, direct sheltering effects, etc.

What are some good articles on wind engineering in Hong Kong?

16. Choi E C C : "Commentary on the Code of Practice on Wind Effects Hong Kong 1983"; Hong Kong Institution of Engineers. 17. Lam R P : "A Review of the full scale Wind Engineering Research at the University of Hong Kong"; Seminar on Wind Engineering, Excelsior Hotel Hong Kong, 28 January 1988. 18.

Does wind affect the design of high-rise buildings in Hong Kong?

Presentation Material: HKWC2019 in NIDA Wind (HKIE Webinar) Synopsis: Wind loads may significantly govern the structural design of high-rise buildings in coastal regions and cities such as Hong Kong. Recently, "Code of practice on Wind Effects in Hong Kong 2019" was launched by Buildings Department for practical design in Hong Kong.

Which terrain categories should be adopted in the Wind Code of Hong Kong?

terrain categories, namely deep open sea, harbour-front and built-up, are proposed to be adopted in the wind code of Hong Kong. A case study of wind-induced loads on generic tall buildings with a square cross-section and varying heights demonstrated that the proposed wind profiles provide a more accurate estimation of wind-induced loads on

What factors influence the extreme wind loading in Hong Kong?

Two dominant factors shape the extreme wind loading in Hong Kong. The first is the exposure to severe typhoons. The second is the protection afforded by one of the most sheltered natural harbours in the world.

wind codes and design standards are published based on theories and previous research findings to provide guidelines on the calculation of wind loading on structures. The Code of Practice on ...
