What are levelised costs for electricity generation technologies?

This report presents levelised costs for electricity generation technologies. A 'levelised cost' is the average cost of the lifetime of the plant per MWh of electricity generated. They reflect the cost of building, operating and decommissioning a generic plant for each technology.

Are 'projected costs of generating electricity' falling?

The key insight of the 2020 edition of Projected Costs of Generating Electricity is that the levelised costs of electricity generation of low-carbon generation technologies are falling and are increasingly below the costs of conventional fossil fuel generation.

How much does electricity cost?

The price of electricity varies. In the United States, the average industrial user purchases electricity at a price of \$0.068/kWh, and residential users purchase electricity at a price of \$0.12/kWh.

Do levelised costs cover wider costs to the electricity system?

Levelised costs do not cover wider costs to the electricity system as they only relate to those costs accruing to the owner/operator of the generation asset. Further analysis on Wider System Impacts, including illustrative scenarios, can be found in Section 7 of the 2020 Electricity Generation Costs Report.

How much will UK electricity cost in 2022?

Adjusting for October 2022 prices, average UK electricity bills could now be £1,224 per year. Given the cost-of-living crisis, questions must be raised as to whether different forms of energy production could be cheaper and enable energy companies to lower these bills. In 2020, the UK produced 14.9% of its electricity from nuclear.

What is the levelised cost of electricity (LCOE)?

The Levelised Cost of Electricity (LCOE) is the discounted lifetime cost of building and operating a generation asset, expressed as a cost per unit of electricity generated (£/MWh). It covers all relevant costs faced by the generator, including pre-development, capital, operating, fuel, and financing costs.
