

How to check the roof photovoltaic panels

Can you install solar panels on a roof in the UK?

The majority of UK homes have a roof suitable for solar panel installation. Great news for anyone looking to generate their own renewable electricity. If you'd like to speak to an MCS certified (or equivalent) solar installer for advice - you can get free no-obligation quotes from up to 4 solar installers in your area using Solar Guide.

Is my roof suitable for solar panels?

If the sun sets in front of you, it's west-facing; if it sets to the left, it's north-facing; and if it sets on the opposite side of the property, it's east-facing. Here's how an installer will decide if your roof is suitable for solar panels, including assessing its direction, usable space, and loft.

Can solar panels be installed on a glass roof?

Glass roofs: As they are too fragile to support the solar panels and fixings. Nevertheless, if your roof isn't suitable for solar panels there are other options too. For example, you may be able to install ground-mounted solar panels to take advantage of any shade-free land you own.

What is the best roof pitch for solar panels?

What's the best roof pitch for solar panels? The best roof pitch for solar panels is between 30-40°; but the angle of the roof can fall outside of this range and generate electricity effectively. Solar panels can still absorb sunlight even when horizontal.

Which roof orientation is best for solar panels?

The diagram above indicates how different roof orientations can impact how suitable your roof is for solar panels. The best type of roof for solar panels is a south-facing roof as they tend to generate the most electricity from solar panels, as they are exposed to the sun's energy when it's most intense (midday) and for the longest period.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m², and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

In fact, your roof may be in more need of TLC than the solar panels you want installed on it. So first, a professional surveyor will check your roof and rafters to ensure that a solar panel ...

Your installer must gain building regulations approval from your local authority for their solar panel system plan before they can proceed. They will have to prove your roof can comfortably support the weight of your
