How do you connect solar panels together?

Connecting PV modules in series and parallel are the two basic options, but you can also combine series and parallel wiring to create a hybrid solar panel array. Some solar panels have microinverters built-in, which impacts how you connect the modules together and to your balance of system. [What Are They?](#)

How do you wire solar panels in parallel?

For instance, if you have three solar panels, you'll need a pair of 3-to-1 MC4 branch connectors. To wire four solar panels in parallel, use a pair of 4-to-1 MC4 branch connectors. Now, to wire my two solar panels in parallel, the initial step was connecting the fuses to the positive leads of the solar panels. [Read more about fusing solar panels.](#)

Can a 400W solar panel be connected in parallel?

If you connect more than one or two 400W portable solar panels in series, the total output voltage will exceed 12V, and you'll blow a fuse (at best). However, many grid-tied and off-grid residential solar power systems require high voltage, which can't be achieved by wiring in PV modules in parallel.

How do you wire solar panels in series?

To wire your solar panels in series, simply link the positive MC4 connector of the first solar panel to the negative MC4 connector of the next one, and continue this pattern for the remaining panels. Once you're finished, you'll have two unconnected terminals at each end of your series--a positive and a negative.

What are the different types of solar panel wiring?

Learning the basics of solar panel wiring is one of the most important tools in your repertoire of skills for safety and practical reasons, after all, residential PV installations feature voltages of up to 600V. There are three wiring types for PV modules: series, parallel, and series-parallel.
