

How to install solar panels to generate more electricity

Do solar panels generate more electricity?

The size of the solar installation is a big factor affecting electricity generation. Although it will cost more upfront to install more panels, a larger solar panel system will always generate more electricity. However, if you generate more than you can use during the day, you'll need a storage battery to make the most of it.

How do solar panels generate energy?

Solar panels collect energy from the sun through contact with daylight. There are two basic iterations of solar panels. Although they all generate energy by converting rays from the sun, they do so in different ways. The two most common solar panels are:

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

How do solar panels convert sunlight into electricity?

This can be converted into electricity using solar photovoltaic panels, known as 'solar PV', installed on your roof. This electricity can power your home, save you money, and help to decarbonise grid supplied electricity. Solar PV systems - a collection of solar panels - turn sunlight into electricity through the 'solar cells' they contain.

Why should you install solar panels?

Installing solar panels lets you use free, renewable, low carbon electricity. You can sell surplus electricity to the grid or store it for later use. According to low-carbon certification organisation MCS, there were more than 183,000 solar panel installations across the UK in 2023.

Do you need a professional to install solar panels?

Despite being intricate bits of kit that can generate electricity from the sun, solar panels are pretty straightforward for a professional to set up. Before an installer is able to crack on with the actual installation, a professional surveyor will need to go into your loft and check the integrity of both the roof and the rafters.
