What is needed to install solar panels on UK homes?

Here's a quick guide to what's needed to install solar panels on UK homes: An installer should visit to determine if the property is suitable for solar panels. They will look at the size and orientation of the roof to decide the best location and angle for installing panels.

Do solar panels produce hot water?

Solar electric panels capture the light from the sun and convert it into the electricity that is used in your home to power your TV, kettle, toaster, phone charger, radio, oven, and so on. Solar panels that produce hot water are known as solar thermal collectors or solar hot water collectors.

What are the requirements for solar PV installation?

The Installer must satisfy themselves, and certify, that the solar PV system installation has been designed, installed, tested, and commissioned in accordance with the code of practice, and other relevant codes, standards and building regulations.

Where should a solar inverter be installed?

The solar inverter is basically the brains of the system, it will convert direct current (DC) output of a PV solar panel into an alternating current (AC). The inverter should attach to the solar panel array and can be either indoors or outdoors. The attic, garage and utility rooms are the best place to install them.

How does a solar panel installation work?

The installer will have to lift some of the roof tiles to fix the anchors to the rafters in the loft. This will give the solar panel mounts a stable foundation, and will make sure they don't get damaged in stormy weather. Once the roof anchors have been fixed to the property, the installer will attach the solar panel mounting system to them.
