What is the best practice guide for PV?

The 'Photovoltaics in Buildings - Guide to the installation of PV systems, 2nd edition' is the main best practice guide for installing PV systems. It references many documents in the 'Engineering Recommendation G59/1', which is the Electricity Industry Recommendation for connecting large generators. LSBIPV - Columbia Centre, Islay

To whom is the photovoltaic (PV) guide applicable?

This guide is applicable to Clients planning or undertaking installation of Photovoltaic (PV) systems on 'Large Scale' buildings. These buildings are typically owned by organisations from the public or private sector, such as educational establishments, local government, a local community, or commercial organisations.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.

Is it necessary to read the PV system documents?

It would be useful for the Client to be aware that the system is being designed and installed using their guidelines and requirements (from the PV system documents), but they do not need to read the documents in depth: 4.2 Communicating special requirements for PV to other trades

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:

What guidance is there on the performance of PV systems?

The Good Practice Guide provides some guidance on the performance of PV systems in Section 4 of the updated PV Installers Guide. The PV Specialist should model the system using one of the software simulation programmes available, which have a 'library' of modules and inverters and can select the sunlight conditions most representative of the site.
