

How to solve the problem of photovoltaic inverter smoking

What if my solar inverter fails?

If your solar inverter fails, your solar installation company is the best resource to turn to. (If you can't remember who installed your solar energy system, check the junction box or inverter to see if the solar company left a sticker with their contact information.)

How can a solar company fix a faulty inverter?

In any of the three events, your solar company can fix the problem quickly, for instance, by reconnecting your inverter to the internet or working proactively with the equipment manufacturer to replace defective equipment.

What are the most common problems with solar inverters?

A possibly obvious, yet very common problem with inverters is that they have been installed incorrectly. This can range from physically misconnecting them to incorrect programming of the inverters. The construction of a solar PV system is usually carried out by an EPC party which in turn appoints installers.

Why is my solar inverter not recording production?

If the answer is no production recorded at all, the issue may be as simple as your inverter losing connectivity with the internet. This is perhaps the most common way that an inverter "fails," and it's a straightforward fix that your solar company may be able to walk you through over the phone.

What should I do if my solar inverter goes off?

If it trips back to the off position, leave it off and call an engineer. Also check your inverter for any fault codes or error messages. Check the real-time and cumulative generation on your inverter (most have these options) to make sure that the solar panels are still generating electricity.

Why do you need a solar inverter inspection?

Regular system inspections help identify and rectify potential inverter problems. Reading the inverter's display panel for error messages is crucial in detecting any issues promptly. Being proactive and vigilant ensures the reliable and safe operation of your solar energy system.
