

# Install a power-generating fan at the door

Should you install an extractor fan?

Installing an Extractor fan can be a game-changer for maintaining fresh air in your home, reducing moisture, and preventing the build-up of mould. Whether you're installing an Extractor fan in your kitchen, bathroom, or any other area of your home, this guide will walk you through the process step-by-step.

How do you install a fan?

Push the fan and ducting into the hole, following the manufacturer's instructions to make sure the electrical cable is threaded through. Mark and drill fixing holes, then screw the fan into place. Take off the central safety cover to show the electrical connections.

How do you install a fan on a grille?

Seal around the edge of the grille with silicone sealant to prevent water ingress. With the wiring and ducting properly set, it's time to mount the fan unit. Fix the fan's mounting plate to the wall using the provided screws and wall plugs. Mount the Extractor fan onto the plate and secure it as per the manufacturer's instructions.

Why do you need an extractor fan & a kitchen fan?

The longer you leave moisture in the air the more problems it can cause around the home. Extractor fans and kitchen fans are great at quietly removing moisture from the air and getting rid of it. And the key benefit is no condensation and no moisture, meaning there's far less chance of mould creeping onto the ceiling and walls.

How do you install a gable fan?

Installing a gable fan may require a carpenter for structural changes or additional framework. Measure and Mark: Using a tape measure, find the center point of the gable-end wall. Use a level to mark a horizontal line across the midpoint, ensuring it's high enough to allow for optimal air expulsion.

How do you install a ductless extractor fan?

With the wiring and ducting properly set, it's time to mount the fan unit. Fix the fan's mounting plate to the wall using the provided screws and wall plugs. Mount the Extractor fan onto the plate and secure it as per the manufacturer's instructions. Double-check that the fan is level to ensure proper functioning.
