

Introduction to Photovoltaic Solar Array

What is a photovoltaic array?

A photovoltaic array, or solar array, is a linked collection of solar modules. The power that one module can produce is seldom enough to meet requirements of a home or a business, so the modules are linked together to form an array.

How does photovoltaic (PV) technology work?

Photovoltaic (PV) materials and devices convert sunlight into electrical energy. What is photovoltaic (PV) technology and how does it work? PV materials and devices convert sunlight into electrical energy. A single PV device is known as a cell. An individual PV cell is usually small, typically producing about 1 or 2 watts of power.

What is the difference between a solar array and a PV system?

The terms "solar array" and "PV system" are often incorrectly used interchangeably, despite the fact that the solar array does not encompass the entire system. Moreover, "solar panel" is often used as a synonym for "solar module", although a panel consists of a string of several modules.

What is a photovoltaic system PV module?

Photovoltaic systems PV modules are manufactured by assembling an array of solar cells. The most common PV modules today have a power capacity between 300 and 500 W, which corresponds to an area between 1.5 and 2.5 m², assuming 20% module efficiency (Fig. 1.3).

What are PV modules & arrays?

Modules can be used individually, or several can be connected to form arrays. One or more arrays is then connected to the electrical grid as part of a complete PV system. Because of this modular structure, PV systems can be built to meet almost any electric power need, small or large. PV modules and arrays are just one part of a PV system.

What is a solar PV system?

Solar PV at different scales Small systems comprising a few PV modules and a battery are used to provide power for lighting and small appliances in rural off-grid households. Grid-connected systems comprising 6-30 PV modules. They are dimensioned to produce the household electricity demand and exchange electricity with the grid when needed.
