Iraq's power system is facing significant challenges due to the mismatch between generation and supply. According to some studies there is a need for around 6GW more capacity to meet the increasing demand. To overcome this problem a large number of households are using diesel generators, either private or shared installed at the neighborhood location. If the existing diesel ...

A detailed study of the status of the electric energy system in Iraq has been introduced. In particular, this work is applied on Iraqi national power system and focused on the Iraqi 400 kV super grid.

generation and distribution system to keep up with relentless demand caused by almost free electricity, especially as temperatures soar to record levels of over 120 degrees, is likely to get worse without reforms.

Iraq's goal is to reduce greenhouse gas emissions by 15 percent by 2030. Reaching 13 percent is conditional on Iraq receiving \$100 billion in financing from investors and financial institutions. Yet despite an estimated \$81 billion spent on the power sector since 2003, frequent blackouts occur because of Iraq's inefficient power system.
