

Is installing solar power on the roof enough

Should I install solar panels on my roof?

If your roof faces another direction as you can likely still see plenty of benefit from installing a solar array. East and west facing roofs are also suitable for solar panels and will still see a good deal of energy generation throughout the course of the day.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m², and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Is your roof strong enough for solar panels?

1. Is your roof strong enough? Some buildings, especially older ones, may not have the roof strength to support solar panels. Post 1970 structures usually have 'W' frame trussed roofs. These will readily support solar panels, which generally weigh about 20kg each.

Can a flat roof hold solar panels?

This is because a solar panel system usually weighs about 20kg per square metre, which the great majority of roofs can hold. However, flat roofs may not always be strong enough for solar panels. Drilling into a flat roof can cause leaks, so an installer will usually ballast the panels instead - but these will add around 80kg per panel.

Can you install solar panels on a roof in the UK?

The majority of UK homes have a roof suitable for solar panel installation. Great news for anyone looking to generate their own renewable electricity. If you'd like to speak to an MCS certified (or equivalent) solar installer for advice - you can get free no-obligation quotes from up to 4 solar installers in your area using Solar Guide.

How do I choose a roof for solar?

It's important to have a large enough roof to fit the amount of solar panels you need. Traditional asphalt and metal roofs are the best materials for solar projects. Solar installations are riskier on tile or wooden roofs. If you do not have a roof suitable for solar, alternatives to roof solar include ground-mounted and community solar.

It's also important to know that some types of roof tiles, like wood, slate, and terracotta, can be easily damaged. This means that installing solar panels on them can be difficult and more ...
