

Is it possible to install solar power on the roof of your home

Should you install solar panels on your roof?

Installing solar panels on your roof can both save you energy costs and reduce your home's environmental impact. Even though there are some DIY solar panel options, installing them is a highly complex project, and you'll still need assistance from an experienced professional.

Can solar panels be installed on a roof that faces north?

Solar PV panels are not recommended for a roof that faces north. You also need to consider both the age of your roof and how strong it is, as PV panels are heavy. Shade could be a big problem for solar panels, so no panels should be installed where there is shade from trees, chimneys, walls or other obstructions.

Can you install ground-mounted solar panels on a pitched roof?

You can install ground-mounted solar panels, though you'll again need more space than you would if you installed panels on a pitched roof. This is because you'll need to space out your panels so they don't cast shade on each other, just like on a flat roof.

Can I install solar panels on my own?

If in doubt it is worth checking the GPDO rules on the Planning Portal and having a word with your local planning department if possible. "Can You Install Solar Panels on Your Own?" Installing solar PV panels is not a DIY job," David Hilton warns.

Can solar panels be mounted on a flat roof?

For solar panels on a flat roof, mounting systems are slightly different and can include a triangle 'ballast' box to support the panels. For solar thermal panels (with cells that use the sun's heat to warm water in a house) things are a little different.

Why are solar panels installed on rooftops?
