

Is my home suitable for solar

Are solar panels a good fit for my home?

Solar panels are a great way to save money on your electricity bill and reduce your environmental impact, but only some homes are a good fit for a home solar system. Your home's current energy efficiency and roof structure will impact panel production.

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.

Is solar energy a viable option for my home?

Here are some tips to help you decide if solar energy is a viable option for your home. According to the California Energy Commission, a solar system needs unobstructed access to the sun's rays for most or all of the day. The easiest way to check your home for solar viability is by typing your address into Google's Project Sunroof.

Is your home a good candidate for a solar system?

If you feel confident that your home is a good candidate, it is time to contact a professional. Although you can find a rough estimate of the size of the solar system you need online, an exact number depends on a lot of different factors that most people won't be able to figure out on their own.

Are solar panels worth it?

Saving money and the planet through solar energy has a lot of appeal, but not every home is the ideal candidate. Your home needs to get plenty of sunlight, have a roof that is big enough and faces the right direction, and you need to pay enough for electricity to make solar panels worthwhile.

What if I can't put solar panels on my property?

And keep in mind, even if you can't put panels on your property, you may still be able to benefit from solar by participating in a community solar project. Solar panels are a great way to save money on your electricity bill and reduce your environmental impact, but only some homes are a good fit for a home solar system.
