

# Is solar power suitable for supermarkets

Can food retail use solar energy?

One of the fastest-growing and most promising commercial segments for solar energy applications is food retail. The logic is inescapable, with supermarkets consuming more electricity than almost any other retail sector.

Could solar power a supermarket?

"If a solar installation is big enough, not only could it power the store, but the supermarket could 'sell' electricity back into the grid and receive credit towards future power needs, while also helping to improve the variety of local energy sources," he wrote.

Should grocery stores install solar?

More retailers should take advantage of the large roofs they tend to have to try out solar installations, advises All Energy Solar, a company based in Saint Paul, Minn. In a recent blog post, the company noted that loans are available to help grocery stores and supermarkets install solar.

Will supermarkets benefit from the Solar Revolution?

Supermarkets have many attributes that make them prime candidates to benefit from the solar revolution: high energy demands throughout the day - bills that can be slashed by solar; direct relationship with ever more environmentally conscious customers; electricity consumption likely to rise with EV charging...

Should retailers invest in solar panels?

While retailers that invest in solar panels have increased upfront costs, over time they will benefit from more predictable electricity costs and reduced business operation expenses, according to All Energy Solar, which estimates that most solar power systems pay for themselves within five to 10 years.

Should supermarkets use solar EV chargers?

Catering for this demand, the number of EV chargepoints at supermarkets has doubled in the last 2 years - now 6.5% of public chargers are at supermarkets. Solar PV - perhaps even in the form of large scale solar carports - can be a cost-effective way to meet this extra electricity demand.
