Are solar panels a viable option for domestic electricity production?

Solar panels are appearing on more and more rooftops around our suburbs as solar photovoltaics (PV) become an increasingly viable option for domestic electricity production. Photovoltaic solar cells, such as those in these rooftop panels, convert light directly to electricity. Image source: Marufish /Flickr. But how exactly does it work?

How efficient are solar panels?

That first solar cell had an efficiency of around 5 per cent. Many years of solid work have seen that rise to generally around 20 per cent. Solar panels are appearing on more and more rooftops around our suburbs as solar photovoltaics (PV) become an increasingly viable option for domestic electricity production.

Should you install a battery alongside solar panels?

Installing a battery alongside solar panels means you can store excess electricity generated by your solar panels to use at a time that suits you. Two-fifths of solar owners in our survey also had a battery that stores electricity for later use. Find out more about solar panel battery storage.

Are solar panels a good investment?

Solar panel problems are common More than a million homes in the UK now have solar panels. They're a guaranteed way to use truly renewable electricity, but many people are not sure about whether to invest.

Can a solar panel power itself?

Some of this energy will be reflected away, dust and dirt on the solar panel will also block some energy and additionally, as solar cells heat up from the wasted energy, their efficiency decreases. And after we have generated all that energy, we then also have energy losses from the inverter and also the wires. So this red LED can't power itself.

Can a solar panel power a load?

We can use a solar panel to directly power a load. But, it only works when exposed to light. For example, this solar fan will automatically turn on when exposed to light. The brighter the light, the faster it spins. But, it doesn't work at night. We therefore need a battery to store the energy.
